

August 16, 2010

Dear Dr. Salinger,

It's been a few months since my lasak surgery and I still can't believe after all these years I don't need contact lenses or glasses. For most of my 63 years, I've been considered "legally blind". I was terrified of laser surgery. I heard the horror stories of laser surgeries going bad. It even happened to my optometrist. So I wasn't going to try it. My vision, however bad or not, was very precious to me.

I initially came to you (by strong recommendation) for an eye emergency. Your professionalism, kindness and fabulous staff not only took care of my problem but never once did anyone mention laser surgery to me. My problem was a contact lens tear and you took great care of me. I went on my way until almost a year later, it happened again! The injury to my eye was even worse this time. I called your office and you saw me immediately! While waiting for you to see me, I began thinking it must be destiny to keep ending up in an eye laser clinic, and maybe I should just ASK about laser surgery.

I was scared, but by this time I had gotten to know you and your incredible team and had great trust in you. If anybody was going to touch my eyes, it would have to be a "Top Gun" in his field! You did not disappoint me! I feel so liberated! It has been months since my procedure and it still isn't old! I'm in wonder everyday. I see better then I ever did with my contact lenses or glasses!

I was so elated with my outcome that my younger sister, Donna had it done. And my sister, Mary is taking the steps necessary to have the surgery in the near future.

"Thank you" just doesn't seem enough for how dramatically you've changed my life. I would highly recommend your clinic and professionally trained staff to anyone thinking to have eye laser surgery.

Most sincerely,

  
JoAnn Caporaletti
